Welcome to The Culinary Institute of America Greystone Campus!

Physical Examination & Health Information

In order to attend the CIA, it is a requirement to have a physical exam performed within the past year and obtain mandatory vaccinations. This information must be documented on the CIA forms. The completed CIA forms must be submitted no later than 45 days prior to your entry date.

The completed Physical Examination & Health Information packet must be submitted by mail, fax or e-mail. Failure to complete these requirements may result in an academic hold and a $200 non-compliance fee.

The Culinary Institute of America
Student Health Services
1946 Campus Drive
Hyde Park, NY 12538

Fax#: 845-905-4061

E-mail: ciahealthservices@culinary.edu

Please e-mail or call the Student Health Office at 1-800-285-4627 ext. 1261 if you have any questions.

Entry Date: __/___/____

Mandatory Student Requirements:
- Tuberculosis (TB) screening questionnaire (page 2).
- Statement of Health Insurance (page 5) – mandatory for international students only.
- Meningitis vaccination response form (page 6).

Mandatory Healthcare Provider Requirements:
- Two MMR vaccine dates or proof of immunity (page 1).
- Hepatitis A vaccine dates (page 1).
- Hepatitis B vaccine (if student <19 years old) (page 1).
- Health Care Provider Tuberculosis Risk Assessment, if warranted* (page 3).
- History and Physical Exam: signed and dated by a healthcare provider (page 4).

*See page 2 Tuberculosis (TB) Risk Assessment guidelines for reference.

Greystone– Revised 6/8/2021
Part IIa: Mandatory Tuberculosis Risk Assessment

Tuberculosis (TB) Risk Assessment – Student Questions

1. Have you ever had close contact with anyone who was sick with tuberculosis (TB)?
   - Yes
   - No

2. Have you ever had a positive TB skin test?
   - Yes
   - No

3. Have you been an employee, volunteer, or resident in a high-risk setting (e.g. correctional facility, healthcare facility, homeless shelter)?
   - Yes
   - No

4. Were you born in one of the countries listed below and arrived in the U.S. within the past 5 years? (If yes, please CIRCLE the country).
   - Yes
   - No

5. Have you ever had frequent or prolonged visits (>1 month) to one or more of the countries listed below? (If yes, CIRCLE the country below).
   - Yes
   - No

Source: World Health Organization Global Health Observatory, Tuberculosis Incidence 2016. Countries with incidence rates of ≥ 20 cases per 100,000 population

If the answer to all the above questions is NO, no further testing or further action is required.

If the answer is YES to any of the above questions, the CIA requires that a healthcare provider complete a Tuberculosis Risk Assessment (Part IIb, page 3).

Student Signature: ___________________________________________ Date: __________

Guardian Signature (only if student <18 years of age): ______________________ Date: __________

Greystone – Revised 6/8/2021
Part IIb: Health Care Provider Tuberculosis Risk Assessment

Tuberculosis (TB) Risk Assessment – Provider Questions

1. Has the student ever had a positive TB skin test or TB blood test? ☐ Yes ☐ No
2. Does the student have a medical condition associated with increased risk of progressing to TB disease if infected (e.g. HIV infection; head/neck/lung cancer; hematologic disease such as leukemia or Hodgkin’s disease; end stage renal disease; chronic malabsorption)? ☐ Yes ☐ No
3. Is the student a member of a high-risk group? ☐ Yes ☐ No

If all the answers above are NO, student is considered low risk and no further testing is needed.
If any of the answers above are YES, student is considered high risk and requires further TB screening.

TUBERCULOSIS SCREENING (within past 6 months):

Does the student have any of the following signs or symptoms of active pulmonary tuberculosis disease? (Check all that apply).
☐ Cough (>3 weeks)
☐ Coughing up blood (hemoptyis)
☐ Chest pain
☐ Loss of appetite
☐ Unexplained weight loss
☐ Night sweats
☐ Fever (> 1 week)

If no symptoms are checked, proceed to TB skin/blood test.
If any symptoms are checked, provide documentation of evaluation to exclude active tuberculosis disease (TB testing, chest x-ray, sputum evaluation, as indicated).

Part V: Mandatory Meningitis Vaccination Response Form

California Health and Safety code, Sections 120395-12399 requires that colleges and universities distribute information about meningococcal disease and vaccinations to all students.

I have (check one box and sign below):

- had the meningococcal immunization within the past five (5) years. The date of vaccination was ____________.

  Note: The Advisory committee on Immunization Practices recommends that all first-year college students up to age 21 years should have at least one (1) dose of Meningococcal ACWY vaccine not more than five (5) years before enrollment, preferably on or after their 16th birthday, and that young adults aged 16–23 years may choose to receive the Meningococcal B vaccine series. College and university students should discuss the Meningococcal B vaccine with a healthcare provider.

- read, or have had explained to me, the information regarding meningococcal disease. I understand the risks of not receiving the vaccine or recommended booster dose. I have decided that I/my child will NOT obtain immunization against meningococcal disease at this time.

  Note: The Meningococcal ACWY vaccine is offered at Walgreens, 1685 TRANCAS ST, Napa, CA for $133.99.

State of California Meningitis Fact Sheet:

What is meningococcal disease?
Meningococcal disease is a severe infection of the bloodstream by the bacteria Neisseria meningitidis. When the lining of the brain/spinal cord becomes infected, it is called meningitis. The disease strikes quickly and can have serious complications, including death.

Who gets meningococcal disease?
Anyone can get meningococcal disease. The disease occurs more often in people who are: teenagers or young adults, infants <1 year of age, living in crowded settings such as college dormitories or military barracks, traveling to areas outside of the United States such as the “meningitis belt” in Africa, living with a damaged spleen or no spleen or have sickle cell disease, have complement component deficiency, exposed during an outbreak, working with meningococcal bacteria in a laboratory.

How is meningococcal disease spread?
It spreads from person-to-person by coughing or coming into close/lengthy contact with someone who is sick/carries bacteria. Contact includes kissing, sharing drinks and living together. Up to 1:10 people carry meningococcal bacteria in their nose or throat without getting sick.

What are the symptoms?
Sudden high fever, headache, vomiting, stiff neck, red/purple skin rash, weakness and feeling ill, light sensitivity. 10-15% of those who get meningococcal disease die. As many as 1:5 will have permanent disabilities. Complications include hearing loss, brain/kidney damage, limb amputations.

How soon do the symptoms appear?
The symptoms may appear 3–4 days after a person is infected. It can take up to 10 days to develop symptoms.

Is there treatment?
Early diagnosis is very important. If caught early, meningococcal disease can be treated with antibiotics. Sometimes the infection has caused too much damage for antibiotics to prevent death or long-term problems. Most need to be cared for in a hospital.

What is the best way to prevent meningococcal disease?
Get vaccinated! Vaccines are available for people over 6 weeks of age. Various vaccines offer protection against the five major strains of bacteria that cause meningococcal disease. All teenagers should receive two doses of vaccine against strains A, C, W and Y (ex: Menactra). The first dose is given at 11 to 12 years of age, and the second dose at 16 years. Teens and young adults can also be vaccinated against the "B" strain, also known as Men B vaccine. Talk to your healthcare provider about whether they recommend vaccine against the "B" strain.

Who should not be vaccinated?
Tell your doctor if you have any severe allergies. Anyone who has ever had a severe allergic reaction to a previous dose of meningococcal vaccine should not get another dose of the vaccine. Anyone who has a severe allergy to any component in the vaccine should not get the vaccine. Anyone who is moderately or severely ill at the time the shot is scheduled should probably wait until they are better.

What should I do if I or someone I love is exposed? Talk with your healthcare provider as they can prescribe an antibiotic to prevent the disease. Resources: Meningococcal Disease – Centers for Disease Control and Prevention (CDC) Reviewed 8/2018
