Welcome to The Culinary Institute of America  
Hyde Park Campus!

Physical Examination & Health Information

In order to attend the CIA, it is a requirement to have a physical exam performed within the past year and obtain mandatory vaccinations. This information must be documented on the CIA forms. The completed CIA forms must be submitted 30 days prior to your entry date.

The completed Physical Examination & Health Information packet must be submitted by mail, fax or e-mail. Failure to complete these requirements will result in an academic hold and a $200 non-compliance fee.

The Culinary Institute of America  
Student Health Services  
1946 Campus Drive  
Hyde Park, NY 12538  
Fax#: 845-905-4061  
E-mail: ciahealthservices@culinary.edu

Please e-mail or call the Student Health Office at 1-800-285-4627 ext. 1261 if you have any questions.

Entry Date: __/____/____

Requirements:

- **Mandatory** two MMR vaccine dates or proof of immunity (page 1).
- **Mandatory** Hepatitis A Vaccine (page 1).
- **Mandatory** Tuberculosis (TB) screening questionnaire (page 2).
- **Mandatory** CIA History and Physical: signed and dated by a healthcare provider (page 4).
- Optional Statement of Health Insurance (page 5) – **mandatory for international students**.
- Consent for Treatment and Services (page 6).
- Meningitis vaccination response form (page 7).
The Culinary Institute of America  
1946 Campus Drive, Hyde Park, NY 12538  
Part I: Student Immunization Form

| Student’s Name: ____________________________ | Date of Birth: ____/____/____ |
| (Last)             (First)   (MI) |

| Address: ___________________________________________________________________ | (Street - Apt #)   (City)   (State - Zip) |

Required Immunizations:

NYS Public Health Law 2165 requires post-secondary students born 01/01/57 or later to show protection against measles, mumps, and rubella. Persons born prior to January 1957 are exempt from this requirement. The first dose of vaccine must be given on or after your first birthday.

**OPTION 1: MMR (Measles, Mumps, Rubella)**

| MMR #1 ____/____/____       | Measles titer ____/____       |
| MMR #2 ____/____/____       | Mumps titer ____/____         |

**Mandatory** Hepatitis A vaccine (minimum 6 months apart)

| Hep A #1 ____/____/____       | Rubella titer ____/____/____ |
| Hep A #2 ____/____/____       |                          |

Varicella vaccine:

| Varicella #1 ____/____/____   |
| Varicella #2 ____/____/____   |

Varicella vaccine:

| Varicella #1 ____/____/____   |
| Varicella #2 ____/____/____   |

**Tetanus-Diptheria-Pertussis (most recent vaccine/booster)**

| Td ____/____/____       | or        | Tdap ____/____/____ |

**OPTION 2: Antibody Titers (attach lab reports)**

| Measles titer ____/____       | Immune ☐ Non-immune ☐ |
| Mumps titer ____/____         | Immune ☐ Non-immune ☐ |
| Rubella titer ____/____/____  | Immune ☐ Non-immune ☐ |

Optional Hepatitis B vaccine:

| Hep B #1 ____/____/____       | Meningitis #1 ____/____/____ |
| Hep B #2 ____/____/____       | Meningitis #2 ____/____/____ |
| Hep B #3 ____/____/____       | (if #1 given prior to age 16) |

**Meningitis vaccine**

| Meningitis #1 ____/____/____ |
| Meningitis #2 ____/____/____ |

Hyde Park – Revised 09/24/2018
Part IIa: Mandatory Tuberculosis Risk Assessment

Tuberculosis (TB) Risk Assessment – Student Questions

1. Have you ever had close contact with anyone who was sick with tuberculosis (TB)?
   - Yes
   - No

2. Have you ever had a positive TB skin test?
   - Yes
   - No

3. Have you been an employee, volunteer, or resident in a high-risk setting
   (e.g. correctional facility, healthcare facility, homeless shelter)?
   - Yes
   - No

4. Were you born in one of the countries listed below and arrived in the U.S. within
   the past 5 years? (If yes, please CIRCLE the country).
   - Yes
   - No

5. Have you ever had frequent or prolonged visits (>1 month) to one or more of
   the countries listed below? (If yes, CIRCLE the country below).
   - Yes
   - No

If the answer to all the above questions is NO, no further testing or further action is required.

If the answer is YES to any of the above questions, the CIA requires that a healthcare provider complete a Tuberculosis Risk Assessment (Part IIb, page 3).

Student Signature: ___________________________ Date: ____________

Hyde Park – Revised 09/24/2018
Part IIb: Health Care Provider Tuberculosis Risk Assessment

Tuberculosis (TB) Risk Assessment – Provider Questions

1. Has the student ever had a positive TB skin test or TB blood test?  
   Yes  No
2. Does the student have a medical condition associated with increased risk of progressing to TB disease if infected (e.g. HIV infection; head/neck/lung cancer; hematologic disease such as leukemia or Hodgkin's disease; end stage renal disease; chronic malabsorption)?  
   Yes  No
3. Is the student a member of a high-risk group?  
   Yes  No

If all the answers above are NO, student is considered low risk and no further testing is needed.  
If any of the answers above are YES, student is considered high risk and requires further TB screening.

TUBERCULOSIS SCREENING (within past 6 months):

Does the student have any of the following signs or symptoms of active pulmonary tuberculosis disease? (Check all that apply).

- Cough (>3 weeks)
- Coughing up blood (hemoptyisis)
- Chest pain
- Loss of appetite
- Unexplained weight loss
- Night sweats
- Fever (>1 week)

If no symptoms are checked, proceed to TB skin/blood test.  
If any symptoms are checked, provide documentation of evaluation to exclude active tuberculosis disease (TB testing, chest x-ray, sputum evaluation, as indicated).

Part V: Informed Consent for Treatment and Services

I, ________________________________ , grant permission to The Culinary Institute of America, the Nurse Practitioner, and the Registered Nursing staff to review my medical forms and administer such medical, diagnostic, rehabilitative treatments, medications, injections, vaccines (Hepatitis A, Hepatitis B, MMR, Meningococcal immunizations, Tuberculosis test/PPD) and procedures which, in their judgment are deemed necessary or advisable. However, should any specific procedure over and above the routine be necessary, I will be informed of its nature and extent. I acknowledge that in an emergency situation, the Institute will make provisions for emergency services through local hospital and urgent care treatment centers.

My signature below indicates that I have read and understood this informed consent.

Part VI: Mandatory Meningitis Vaccination Response Form

New York State Public Health Law 2167 requires that colleges and universities distribute information about meningococcal disease and vaccinations to all students.

I have (check one box and sign below):

- had the meningococcal immunization within the past five (5) years. The vaccination date is listed on Part I – Student Immunization Form.

  Note: The Advisory committee on Immunization Practices recommends that all first-year college students up to age 21 years should have at least one (1) dose of Meningococcal ACWY vaccine not more than five (5) years before enrollment, preferably on or after their 16th birthday, and that young adults aged 16–23 years may choose to receive the Meningococcal B vaccine series. College and university students should discuss the Meningococcal B vaccine with a healthcare provider.

- read, or have had explained to me, the information regarding meningococcal disease. I understand the risks of not receiving the vaccine. I have decided that I/my child will NOT obtain immunization against meningococcal disease.

  Note: The Meningococcal ACWY vaccine is offered at the CIA Student Health Services Office for $130.00.

NYSDOH Meningococcal Disease Fact Sheet:

What is meningococcal disease?
Meningococcal disease is a severe infection of the bloodstream by the bacteria Neisseria meningitidis. When the lining of the brain/spinal cord become infected, it is called meningitis. The disease strikes quickly and can have serious complications, including death.

Who gets meningococcal disease?
Anyone can get meningococcal disease. The disease occurs more often in people who are: teenagers or young adults, infants <1 year of age, living in crowded settings such as college dormitories or military barracks, traveling to areas outside of the United States such as the "meningitis belt" in Africa, living with a damaged spleen or no spleen or have sickle cell disease, have complement component deficiency, exposed during an outbreak, working with meningococcal bacteria in a laboratory.

How is meningococcal disease spread?
It spreads from person-to-person by coughing or coming into close/lengthy contact with someone who is sick/carries bacteria. Contact includes kissing, sharing drinks and living together. Up to 1:10 people carry meningococcal bacteria in their nose or throat without getting sick.

What are the symptoms?
Sudden high fever, headache, vomiting, stiff neck, red/purple skin rash, weakness and falling ill, light sensitivity. 10-15% of those who get meningococcal disease die. As many as 1:5 will have permanent disabilities. Complications include hearing loss, brain/kidney damage, limb amputations.

How soon do the symptoms appear?
The symptoms may appear 3–4 days after a person is infected. It can take up to 10 days to develop symptoms.

Is there treatment?
Early diagnosis is very important. If caught early, meningococcal disease can be treated with antibiotics. Sometimes the infection has caused too much damage for antibiotics to prevent death or long-term problems. Most need to be cared for in a hospital.

What is the best way to prevent meningococcal disease?
Get vaccinated! Vaccines are available for people over 6 weeks of age. Various vaccines offer protection against the five major strains of bacteria that cause meningococcal disease. All teenagers should receive two doses of vaccine against strains A, C, W and Y (ex: Menactra). The first dose is given at 11 to 12 years of age, and the second dose at 16 years. Teens and young adults can also be vaccinated against the "B" strain, also known as MenB vaccine. Talk to your healthcare provider about whether they recommend vaccine against the "B" strain.

Who should not be vaccinated?
Tell your doctor if you have any severe allergies. Anyone who has ever had a severe allergic reaction to a previous dose of meningococcal vaccine should not get another dose of the vaccine. Anyone who has a severe allergy to any component in the vaccine should not get the vaccine. Anyone who is moderately or severely ill at the time the shot is scheduled should probably wait until they are better.

What should I do if I or someone I love is exposed?
Talk with your healthcare provider as they can prescribe an antibiotic to prevent the disease.
